

Create an A4 poster, labelling all parts of the cell (shown above). Make sure you explain the function and structure of each part of the cell.

Tissues are groups of similar cells carrying out specific functions. In this unit, we will look at:

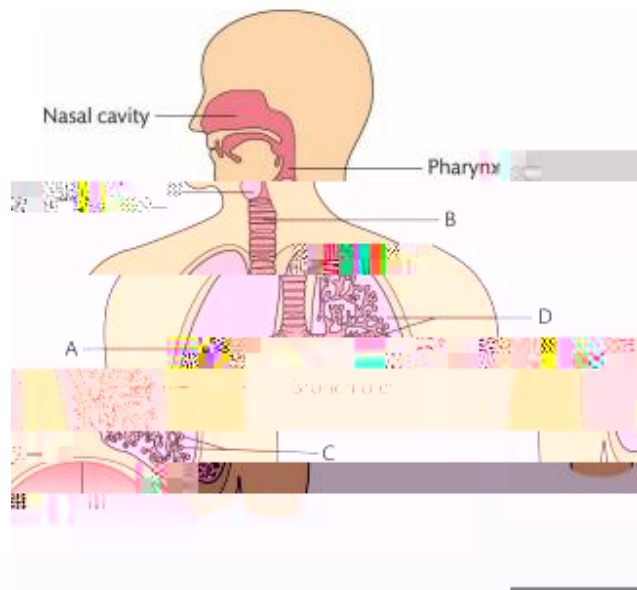

For each type of tissue, you need to explain the function and structure, then identify where it is located in the body. You can present this in a table or as a report.

Produce an A3 mind map, identifying all the following body organs: Heart, lungs, brain, stomach, liver, pancreas, duodenum, ileum, colon, kidneys, bladder, ovaries/testes, uterus, and skin.

You need to include a picture of the organ, the structure and the function of each.

The respiratory system allows oxygen in the air to enter the body, and to be taken up by cells and tissues. The respiratory system also eliminates carbon dioxide from the body.

Which letters on the diagram show the following parts of the body?

Bronchi: _____

Lungs: _____

Trachea: _____

Alveoli: _____

Produce a table to explain the structure and function of the following parts of the

The purpose of research is to find out information or gain knowledge. Research is a systematic or orderly procedure that explores issues to establish facts or reach new conclusions.
